

Home Covid19 Q&A

Task: Riyad, Hamzah and Iqra asked questions about Covid19 and then they had to answer them.

Hamzah Year 4

1. **Did the Bats cause Covid19?**

I checked one website

<https://edition.cnn.com/2020/03/19/health/Covid19-human-actions-intl/index.html> which says: “bats are a possible source of Covid19. Yet some scientists concur they are not to blame for the transfer of the disease”.

2. **Why should the elderly stay at home?**

The elderly should stay at home because it is more of a higher risk for them.

3. **Why should you not touch people?**

You should not touch people because you or the other person could be infected. If you touch people then this could spread more.

4. **Can pets get Covid19?**

This website I checked <https://www.cdc.gov/Covid19/2019-ncov/daily-life-coping/animals.html> says: (We do not have evidence that companion animals, including pets, can spread COVID-19.)

Conclusion: what I have learnt from this Q&A is that its not the bats fault that the humans got the virus but the humans were next to it for it to become a problem. I know for sure that staying home will stop and help this virus spreading to others. Also, this virus can cue spreading by touching. Lastly there is no evidence that pets are affected.

Advice: I advise everyone to stay home and down go out if not necessary. I also tell people to wash their hands with warm water and soap for 20 seconds.

WE WILL LIKE TO THANK ALL PUBLIC SERVICES, KEY WORKERS & ALL DURING THIS OUTBREAK FOR THE HELP & SUPPORT, WITH A SPEIACAL THANKS TO ALL ST PETERS TEACHERS AND STAFF!!!
